MOBILE PROGRAMMING (FLUTTER) • MIDTERM PROPOSAL

HomeServe Uzbekistan

Connecting households in Uzbekistan with trusted local masters and multi-service companies for everyday home emergencies.

LOCATION FOCUS
Tashkent & Regional Cities

PLATFORM
Flutter Cross-Platform App

COURSE
Weeks 1–7 Architecture

01 • THE REAL LOCAL PROBLEM

Finding Urgent Home Help in Uzbekistan Is Broken

Sudden Home Emergencies

Broken electric tools or burst pipes with zero DIY repair skills.

Scattered Telegram Chats

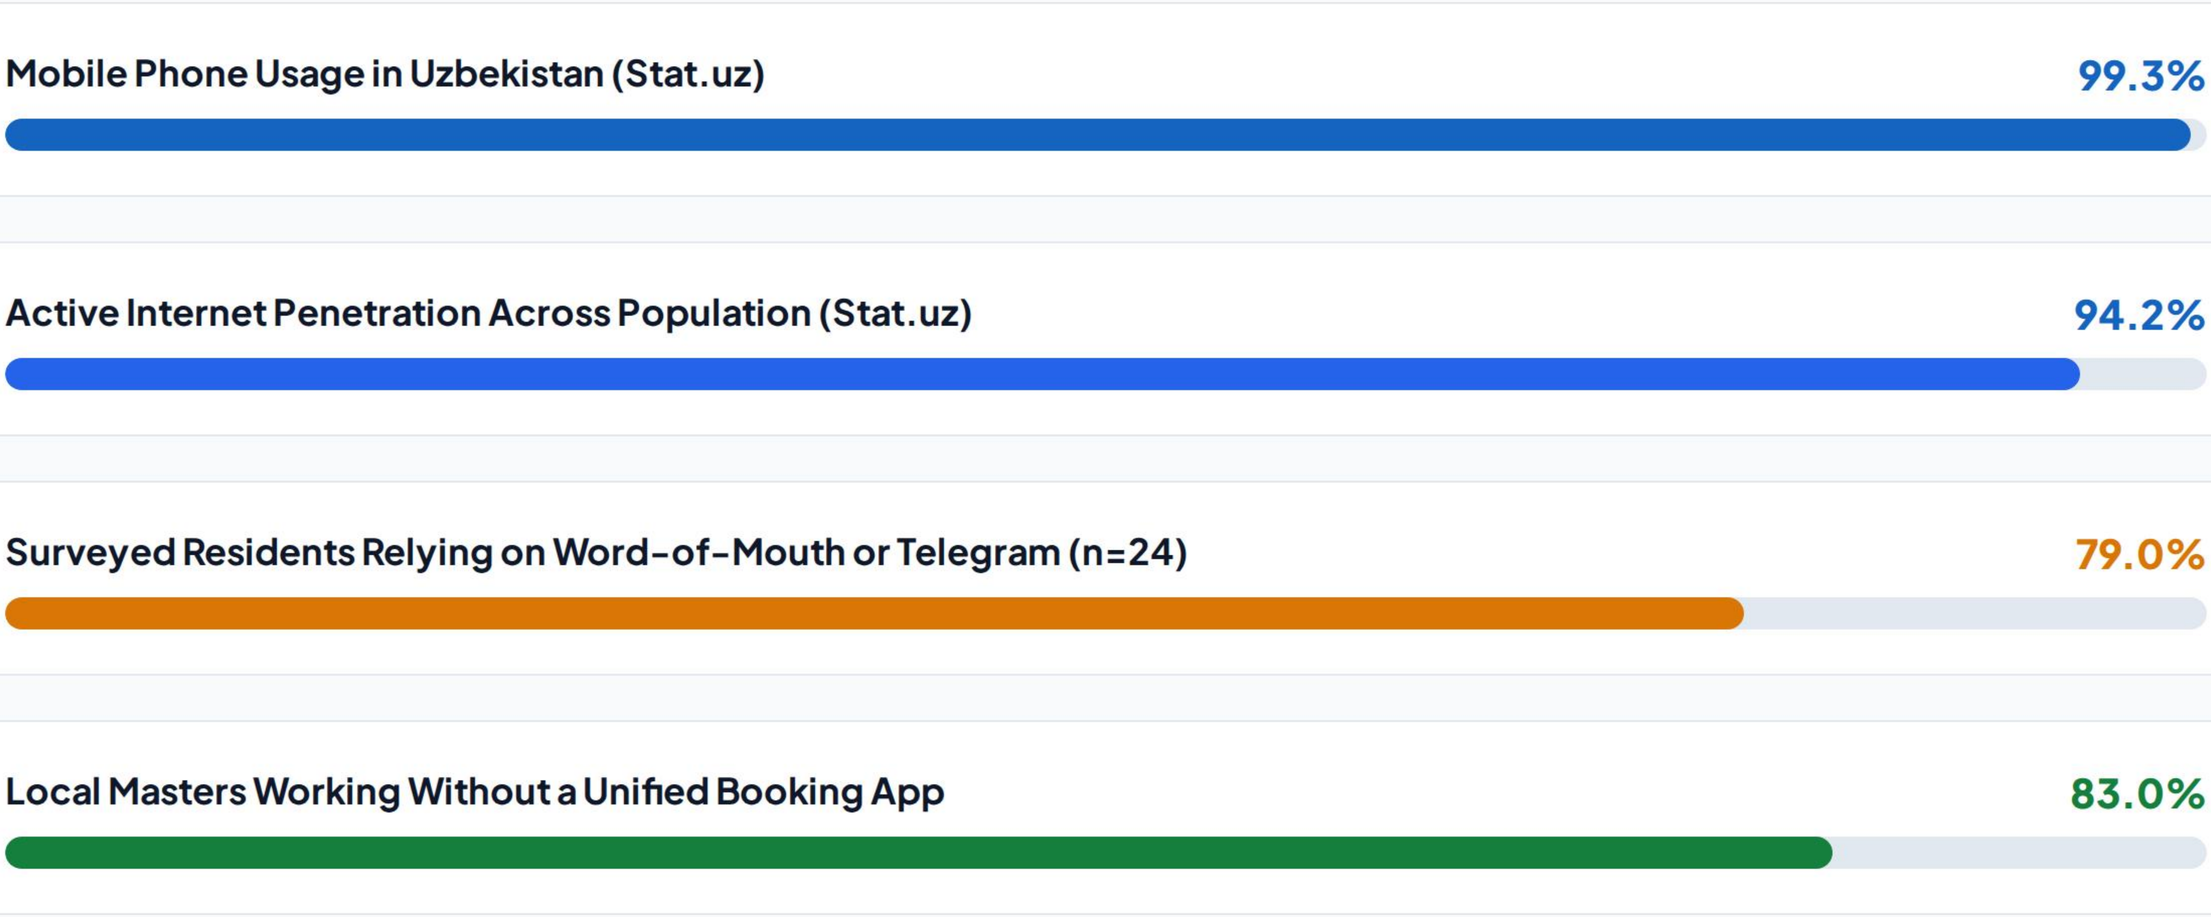

Unverified phone numbers across OLX and mahalla channels.

No Trusted Care Filter

Hard to find reliable babysitters or elderly care on short notice.

02 • STATISTICAL EVIDENCE (STAT.UZ & LOCAL SURVEY)

Why a Mobile Solution Works in Uzbekistan Today

03 • SCOPE & TARGET AUDIENCE

Target Users & One-Sentence Problem Scope

"Urban families in Uzbekistan cannot quickly book verified solo masters or multi-service companies with transparent pricing during daily household emergencies."

1. Household Customers

Broken Appliances: Fast repair for electrical tools or plumbing.

Family Care: Trusted babysitters or elderly care on demand.

Direct Chat: Discuss job price and details before booking.

2. Companies & Solo Masters

Multi-Service Setup: One firm can offer Renovation, Gardening, Plumbing.

Zero Paperwork Barrier: Solo masters register without complex licenses.

Profit Tracking: Live earnings dashboard and order filter.

How We Onboard Providers & Deliver Value

Organic Local Promotion

Direct outreach to Tashkent masters instead of fake pre-filled listings.

Multi-Category Profiles

Companies select multiple skills like Renovation, Disinfection, Locksmith.

Frictionless Solo Sign-Up

Solo individuals register with service descriptions without heavy legal docs.

Transparent Order Lifecycle

Built-in customer chat, agreed price display, one-tap order completion.

05 • MAIN USER FLOW

5-Step End-to-End Service Resolution Flow

1

Select Role

Choose Customer or Master/Company on launch.

2

Pick Service

Filter Electric, Renovation, Care, or Disinfection.

3

Send Request

Submit problem details and Tashkent district.

4

Accept & Chat

Provider accepts request and clarifies via chat.

5

Close Order

Job marked Finished and added to total profit.

06 • CUSTOMER MODE WIREFRAMES (SCREENS 1–3)

Customer Onboarding, Home & Service Discovery

1. Role & Account Setup

Splits Customer vs Master onboarding.

2. Customer Home

Quick emergency booking & top masters.

3. Service Categories

Search Electric, Disinfection, Care, Doors.

07 • BUSINESS MODE WIREFRAMES (SCREENS 4–6)

Provider Dashboard, Dual-Filter Orders & Profile

TOTAL PROFIT MONITOR

$1,420 (+18%)

14 Completed Jobs • Online

4. Business Home

Tracks live profit and incoming customer service requests.

Active (2) | All Orders (16)

Filter: Renovation & Gardening ▾

5. Service Orders

Separates Active vs Mixed Orders with service filter and chat.

6. Unified Profile

Manages provided services, working hours, and districts.

Widgets, Layout, State & Forms Per Screen

Screen	Key Layout & Widgets	State & Navigation	Forms & Validation
1. Welcome & Auth	Scaffold, Column, Padding, ElevatedButton	StatefulWidget, Navigator.pushNamed	Form, GlobalKey, TextFormField
2. Customer Home	ListView.builder, Row, Container, Card	Lifted state in parent AppShell	Booking request modal input
3. Categories Grid	GridView.count, Expanded, Icon	Pass selected category via Constructor	TextField with TextEditingController
4. Business Home	Column, Switch, ListView.builder	setState() for Online toggle & Profit	Accept/Decline action callbacks
5. Service Orders	Row (Active/All toggle), DropdownButton	setState() filters list & closes order	Chat reply TextField controller

3 Dart Classes Powering Customer & Business Modes

```dart
class AppUser
final String id;
final String fullName;
final String phone;
final String district;
final bool isBusiness;
```

```dart
class ServiceProvider
final String id;
final String brandName;
final bool isSoloMaster;
final List services;
final String description;
bool isOnline;
double totalProfit;
```

```dart
class ServiceOrder
final String id;
final String serviceType;
final String clientName;
final double price;
String status; // Active/Done
List chatMessages;
```

10 • SCOPE BOUNDARIES

What Is Out of Scope for Weeks 1–7

Cloud Backend & Auth

In-memory Dart lists replace Firebase or REST APIs.

Payme / Click API

Prices are tracked locally without live bank processing.

Live GPS Map SDK

Tashkent districts use dropdown selectors instead of live maps.

Push Notifications

New requests update via shared app state instead of FCM.

11 • TEAM RESPONSIBILITIES & Q&A

Who Did What — Team Breakdown

Member 1 (Team Lead)

Problem research, Stat.uz data analysis, local user survey.

Member 2

Customer user flow, onboarding & category Figma screens.

Member 3

Business mode UI: profit dashboard, dual-filter Orders tab.

Member 4

Weeks 1–7 Flutter widget plan, state management & Dart models.
